

G-Max Safety Testing

The best way to ensure player safety and safe performance of your athletic fields.

Player safety is the number one concern for parents, teachers and coaches. Ensuring safe play through certified ASTM safety testing is where TD Sports can help.

We start with an overall inspection of the playing surface for fiber wear and consistency of the infill cushioning system. We test the surface hardness in up to 12 areas (per ASTM safety standards and guidelines). Once the test is completed, a written report of the findings is provided and electronically stored for you.

If there are areas that are found to be unsafe, TD Sports will perform the services necessary to bring your playing field back in to safety compliance.

Field services include:

- ✓ FieldCare™ grooming and maintenance service
- ✓ Infill system rejuvenation and redistribution
- ✓ Magnet sweep to remove metal objects
- ✓ Perimeter drain flush and debris removal
- ✓ Sub surface inspection and reconstruction
- ✓ Surface area patching & replacement
- ✓ Field surface protection products
- ✓ Resurfacing by the original manufacturer

TD Sports is your one-stop source for athletic field safety testing and maintenance!
